Glossary

CVE	Common Vulnerabilities and Exposures - a standardised identifier for a publicly disclosed security vulnerability (e.g. CVE-2024-3400).
CVSS	Common Vulnerability Scoring System - a 0-10 numeric severity score that quantifies the characteristics of a vulnerability.
KEV	CISA Known Exploited Vulnerabilities catalogue - a list of CVEs that have been actively exploited in the wild, maintained by the US Cybersecurity and Infrastructure Security Agency.
EPSS	Exploit Prediction Scoring System - a machine-learning probability (0-1) that a CVE will be exploited in the next 30 days, issued by FIRST.
MTTR	Mean Time To Remediate - the average number of calendar days between a job being opened and being marked resolved or closed.
SLA	Service Level Agreement - a policy commitment that specifies the maximum number of days allowed to remediate a finding of a given severity before it is considered overdue.
RBAC	Role-Based Access Control - a security model that restricts system access based on a user's assigned role (Administrator, Analyst, Risk Owner, Auditor).
RAG	Retrieval-Augmented Generation - an AI technique that retrieves relevant advisory documents from a knowledge base before generating a recommendation, grounding the output in real evidence.
